

# **NDAR Version 2.1 Release Notes (June 5, 2009)**

## **Validation Tool**

1. Improved layout
2. Ability to include/exclude files
3. Load CSV files and convert to CDISC XML format within the tool
4. Mapping of input field names to NDAR data dictionary field names tool allowing field mappings to be saved so that any mappings need to be performed only once
5. Ability to output warnings and errors to a user defined file
6. Ability to concatenate files for large forms

## **Portal**

1. Improved account administration
2. New my profile capability
3. Implemented capability to enable an investigator to upload policy and procedure files into their profile and associate those documents with one or more NDAR Collections supporting NDAR policies and procedures.
4. Updated Account and Collection email functionality
5. Re layout of Collections (will be applied to Study next iteration)
6. Improved data submission workflow
7. Improved Dataset sharing workflow
8. Help Files were added to Home Page, Account Request, My Profile, and Collections.

## **Query Tool**

1. Advanced Data Search (Query) - Update Hierarchy Display to show Dataset Title as well as Dataset ID
2. Use data mediator "IN" functionality to check dataset permissions – improves performance
3. Download of a \_single\_ file, either image or genomics package directly.

## **Field Integration Tool (FIT)**

1. Completed design of FIT tool with wireframes

## **Security**

1. Conducted independent Security certification/assurance and received 2 year authorization to operate as defined by NIH policy.

## **Codebook**

1. Updated Codebook to define range value adjustments per NDAR Data Dictionary Special Interest Group recommendations
2. Updated Codebook to define data values that are Required, Recommended or Optional per NDAR Data Dictionary Special Interest Group recommendations.
